| Project Title | Precise Coffee Quality Prediction |
| Maximum Marks | 10 Marks                          |

#### **Model Optimization and Tuning Phase**

The Model Optimization and Tuning Phase involves refining machine learning models for peak performance. It includes optimized model code, fine-tuning hyperparameters, comparing performance metrics, and justifying the final model selection for enhanced predictive accuracy and efficiency.

#### **Hyperparameter Tuning Documentation (6 Marks):**

| Model                       | Tuned Hyperparameters | Optimal Values |
|-----------------------------|-----------------------|----------------|
| Logistic<br>Regression      | -                     | -              |
| Decision Tree<br>Classifier | -                     | -              |
| Random Forest<br>Classifier | -                     | -              |

**NOTE:** In our project not provided grid search and hyperparameters topic.

# **Performance Metrics Comparison Report (2 Marks):**

| Model               | Optimized Metric                      |              |              |                      |                |  |
|---------------------|---------------------------------------|--------------|--------------|----------------------|----------------|--|
|                     |                                       | precision    | recall       | t1-score             | support        |  |

|                     |                                       |              |              |                      |                |  |

### **Final Model Selection Justification (2 Marks):**

| Final Model                 | Reasoning  |
|-----------------------------|--|
|                             | Random Forest was chosen for the coffee quality prediction project due to its superior accuracy and robustness against overfitting, achieving an optimized accuracy score of 94.9%. This ensemble method effectively handles non-linear relationships and is less sensitive to noise and outliers compared to other models. Additionally, Random Forest provides valuable insights into feature importance, requires minimal |
| Random Forest<br>Classifier | data preprocessing, and scales well with large datasets, making it the optimal choice for delivering consistent and reliable coffee quality assessments  |
